

ABSTRACT

A vertical sharpness adjustment device with which a viewer of a TV receiver can choose a degree of vertical sharpness adjustment to enhance a contour of a picture in vertical direction is offered. The vertical sharpness adjustment device includes a
5 terminal to which a vertical sharpness control signal given by the viewer is applied, a control circuit to which the vertical sharpness control signal from the terminal is applied and a vertical sharpness adjustment circuit which adjusts the degree of the vertical sharpness of a video signal according to the vertical sharpness control signal from the control circuit.
